| Stage | Post-Implementation | Duration | 2022 - 2025 |
| Total Project Cost | \$45,900 | Funding Request | \$0 |

Aquatic Invasive Species Program > Prevent, Control, or Eradicate Aquatic Invasive Species

In October 2022 during a surveillance monitoring survey, a dense Eurasian watermilfoil infestation was observed by divers. In 2023, Tahoe RCD's contracted dive team installed barriers in June to control Eurasian watermilfoil. Barriers were removed in November 2023, and follow-up surveys and plant removal continued in 2024. Due to successful diver removal efforts and minimal detection of newly rooted Eurasian watermilfoil during surveillance visits in 2024, this project has reached post-implementation surveillance status.

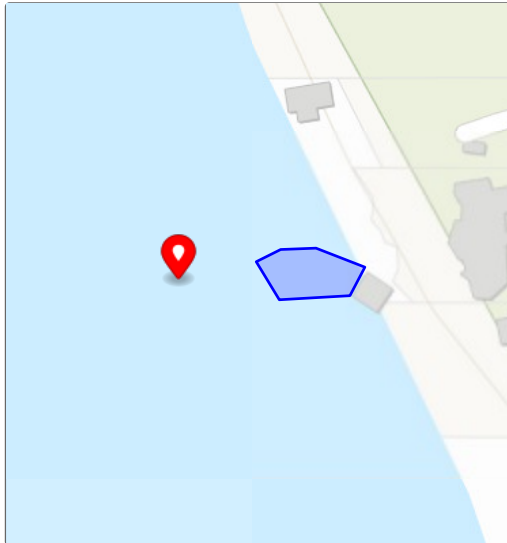

Targeted Performance Measures

- Acres of Invasive Species Inventoried
- Acres Treated for Invasive Species

Threshold Categories

- Fisheries
- Recreation
- Scenic Resources
- Water Quality

Location

Eurasian watermilfoil before aquatic invasive plant removal, south of Cave Rock, Nevada State Parks, NV, June 2023.

Targeted Funding

■ Secured Funding: Lake Tahoe Restoration Act (TRPA), \$45,900
