

Increase Lahontan Cutthroat Trout Hatchery Production Capacity

Project Number	02.02.03.0019		
Action Priority	Restore and Protect Native Fish and Wildlife		
Implementers	U.S. Fish and Wildlife Service		
Supporting Agencies			
Primary Contact	Roy Ulibarri (roy_ulibarri@fws.gov)		
Stage	Planning/Design	Duration	2020 - 2028
Total Project Cost	\$3,000,000	Funding Request	\$3,000,000

Forest Restoration Program ➤ Restore and Protect Native Fish and Wildlife

No Key Photo provided for this Project

Infrastructure improvements are needed at both the USFWS's Lahontan National Fish Hatchery and CDFW's American River Fish Hatchery. Increasing chilled water supply and adding capacity to accommodate a larger Pilot Peak Lahontan cutthroat trout (LCT) broodstock would help expand production for stocking the Tahoe Basin. These improvements would assist reintroduction of an iconic native trout to the basin, expand recreational angling opportunities, and would support the LCT conservation goal of achieving self-sustaining, interconnected populations within historic habitat.

Targeted Performance Measures

- Fish Planted

Threshold Categories

- Fisheries
- Wildlife
- Recreation

Location

Targeted Funding

■ Targeted Funding: Lake Tahoe Restoration Act (USFWS), \$3,000,000
