

## P092: Effectiveness of Reintroductions and Probiotic Treatment as Tools to Restore the Endangered Sierra Nevada Yellow-legged Frog

<b>Project Number</b>	04.01.01.0046		
<b>Action Priority</b>	Conduct Applied Scientific Research		
<b>Implementers</b>	Desert Research Institute		
<b>Supporting Agencies</b>	Unknown or unspecified		
<b>Primary Contact</b>	Alan Heyvaert (alan.heyvaert@dri.edu)		
<b>Stage</b>	Completed	<b>Duration</b>	2011 - 2015
<b>Total Project Cost</b>	\$295,064	<b>Funding Request</b>	\$0

### Science Program > Conduct Applied Scientific Research

The Sierra Nevada yellow-legged frog (*Rana sierrae*) is a special status species that was historically abundant in the central and northern Sierra Nevada, including the Lake Tahoe Basin. As a consequence of its precipitous decline, it is increasingly the focus of conservation and restoration efforts led by both federal and state agencies. The project provides critical information and guidance on the effectiveness of frog reintroductions as a means to reestablishing *R. sierrae* populations in areas from which they were previously extirpated.
