

P099: Renewing and Refining the Tahoe Yellow Cress Conservation Strategy

Project Number 04.01.01.0122
Action Priority Conduct Applied Scientific Research
Implementers U.S. Forest Service - Pacific Southwest Research Station
Supporting Agencies U.S. Forest Service - Pacific Southwest Research Station
Primary Contact Pat Manley (pmanley@fs.fed.us)

Stage Completed
Duration 2011 - 2013
Total Project Cost \$82,503
Funding Request \$0

Science Program ➤ Conduct Applied Scientific Research

In August 2002, the Conservation Strategy for Tahoe yellow cress was finalized, and it has guided the adaptive management and conservation of TYC for more than 12 years. This revised Conservation Strategy for Tahoe yellow cress will improve TYC adaptive management and continue the cooperation and conservation initiated in 2002. TYC management goals and objectives have been modified to accommodate the different management approaches required on public and private property and to reflect a shift away from promoting the metapopulation dynamic of the species and toward managing persistence.
