Basin Resource Inventory and Evaluation (BRIE)

| Project Number | 04.01.02.0048 | | |
|-----------------------------|---|-----------------------------|--------------------|
| Action Priority | Implement Programmatic Monitoring and Reporting | | |
| Implementers | U.S. Forest Service - Lake Tahoe Basin Management Unit | | |
| Supporting Agencies | California Tahoe Conservancy, U.S. Forest Service - Lake Tahoe Basin Management Unit | | |
| Primary Contact | Sarah Muskopf (sarah.muskopf@usda.gov) | | |
| Stage Total Project Cost | Planning/Design \$930,000 | Duration Funding Request | 2018 - 2028 \$0 |

Science Program > Implement Programmatic Monitoring and Reporting

• Soil Conservation

• Water Quality

The USFS Lake Tahoe Basin Management Unit will conduct inventories and postimplementation monitoring in the UTR and Ward Creek watersheds. The need for these efforts is two-fold. Inventories are needed to determine the status of habitat and sensitive species. This information provides data for project level analysis but also identifies where restoration actions are needed. Post-implementation monitoring allows land managers to determine the success of restoration efforts, identify if adaptive management is needed, and/or where additional restoration actions are warranted.
